

## Active and inactive routes

If a route has already been created, an additional button appears in a separate column with which the route can be activated or deactivated.

Immediately after creating the route, it is of course set to "Yes" (active). If a route is not to be operated for a longer period of time, it can be set to inactive using the button.

Already generated orders are retained when deactivated. Only if a route is completely deleted do the associated orders also disappear and a recourse for orders not flown is initiated. The recourse is currently 50% of the order value.
