

Known Issues

- When you press the „suspend“ button the log message will say „you aborted the flight and will not be able to complete it“ by mistake.

Windows

YAACARS "hangs" after some seconds (2019-01-16)

If you encounter any hanging/unresponsiveness issues with YAACARS, try to:

- disable Windows "Gaming Mode"
- DON'T run it from "c:\Program Files" or similar windows-managed locations
- run it with administrator privs
- run it with legacy support for "Windows XP" or "Windows Vista"

Prepar3D

PMDG 737NGX (2018-12-21)

It seems that this aircraft uses internal fuel tanks. Only default LEFT MAIN and RIGHT MAIN are used and visible to YAACARS

Might still be a bug - didn't investigated further. Found on the web:

https://fsuipc.simflight.com/beta/Offset_Mapping_PMDG737NGX.pdf According to this document, the 737 has LM/C/RM tanks, but also it's own datarefs to read the tanks ...

X-Plane

JAR Airbus A320

- Fuel can only be loaded with Fuel Truck connected
- Payload can not be applied (as far as we tried)

SSG Boeing 747

From version 2.0 on YAACARS detects "refuelling" and "defuelling" so your fuel tanks (in FTW) will be empty within a very short time!

⇒ try to start the flight in YAACARS after the APU has been shut down and finish the flight before turning on the APU back on
